

RAJESH RAJAN

Java Software Engineer

Ringstedsgatan, Kista 16448, Stockholm, Sweden
+46 76 439 7704 | connect2rajeshrajan@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

Java Software Engineer with 12+ years of experience building and operating cloud-native microservices in production environments. Advanced expertise in Java 17/21 and Spring Boot. Proven experience with event-driven architectures using Apache Kafka, REST and GraphQL API design, and container orchestration with Kubernetes and Docker. Strong background in both NoSQL (MongoDB) and relational (PostgreSQL, MySQL, Oracle) databases. Experienced with CI/CD automation using GitHub Actions and Jenkins, and with observability tooling including dashboards, log analysis, and alerting. Self-managed, ownership-driven engineer comfortable taking full responsibility for service areas end-to-end — from feature delivery through production monitoring and incident response. Based in Kista, Stockholm — available immediately.

CORE TECHNICAL SKILLS

Backend: Java 17/21 (12+ yrs, advanced), Spring Boot, Spring MVC, Spring Data, RESTful API Design, GraphQL (familiar), Microservices, Event-Driven Architecture

Message Brokering: Apache Kafka — real-time data streams, status updates, event-driven pipelines

Databases: PostgreSQL, MySQL, Oracle DB (schema design, query optimisation, indexing), MongoDB (NoSQL)

Orchestration: Kubernetes, ArgoCD (familiar), Docker, container management and deployment

CI/CD: GitHub Actions, Jenkins, Maven, Git, automated build & deployment pipelines

Observability: Grafana, Kibana — dashboard creation, log analysis, alert configuration, production monitoring

Cloud: AWS (EC2, Lambda, S3, RDS) — Certified Solutions Architect, Azure, GCP

Testing & Quality: JUnit, Mockito, TDD, Integration Testing (85%+ coverage), Code Review, technical documentation

Agile: Scrum — daily stand-ups, weekly planning, biweekly retrospectives, JIRA

Other: Swedish Driving Licence (Category B), English (Fluent), Swedish (Professional working proficiency)

EMPLOYMENT HISTORY

Big Data Engineer & AI Platform Developer | Volvo Trucks (Master's Thesis) Nov 2024 – Nov 2025
Gothenburg, Sweden

- Investigated and implemented an unsupervised anomaly detection framework using Echo State Networks (ESNs) and the COSMO consensus scoring framework on real-world heavy-duty electric vehicle fleet telemetry, in collaboration with Volvo Trucks.
- Developed and applied route-level anomaly screening: encoded GPS trajectories from 100+ trips into fixed-length ESN embeddings, applied Isolation Forest to flag anomalous routes, and implemented a road segment classification framework categorising samples into Straight, Turn, Extreme Turn, and Roundabout.
- Evaluated model performance using classification-based metrics (Precision, Recall, F1, ROC-AUC) and score-based diagnostics across synthetic fault types and real-world fleet data, benchmarking ESN-derived features against rolling statistical moments, PCA, and classical anomaly detectors.

Senior Java Developer | Apica Systems AB
Stockholm, Sweden

Aug 2021 – May 2023

- Built distributed backend services using Spring Boot, implementing RESTful APIs, and Docker containerization for scalable microservices architecture with modern development practices.
- Designed and implemented Dark Mode and Color Blindness accessibility themes for ZebraTester — delivering frontend UI/UX improvements that enhanced usability and accessibility compliance across the platform.
- Integrated ZebraTester with AWS cloud platform, implementing CI/CD pipelines and automated deployment workflows to improve release automation, deployment reliability, and adaptability.
- Collaborated with cross-functional teams to implement advanced features such as automatic script generation, real-time performance analytics, and distributed load execution.

Technical Lead & Senior Java Engineer | Allianz Technology India & Munich Sep 2010 – Aug 2021
India / Munich, Germany

- Built and maintained Java 17+/Spring Boot microservices for order and transaction processing — real-time status tracking, transactional communication services, and document generation pipelines serving millions of daily operations at 99.9% availability.
- Designed and owned REST APIs and event-driven services on Apache Kafka, ensuring reliable, high-performance data flow between frontend, backend, and third-party systems.
- Owned services end-to-end: self-managed delivery of work packages, participated in daily stand-ups, weekly planning, and retrospectives; maintained alignment with cross-functional teams and technical leadership.
- Established observability standards: Grafana and Kibana dashboards for monitoring production services, alert configuration, log analysis, and incident response maintaining 99.9% system availability.
- Drove CI/CD automation with Jenkins and GitHub Actions reducing deployment time by 70%; established JUnit/Mockito testing framework achieving 85% code coverage; maintained thorough technical documentation to company standards.
- Optimised PostgreSQL and Oracle schemas achieving 60% query improvement; worked with both NoSQL and relational databases across multiple production systems on AWS and Kubernetes environments.

EDUCATION

Master of Science in Information Technology | 2025

Halmstad University, Sweden | *Thesis: Time-Series Anomaly Detection in Heavy-Duty Electric Vehicles (Volvo Trucks)*

Master of Computer Applications (MCA) | 2010

University of Calicut, India

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
- Sun Certified Java Programmer (SCJP)
- Oracle Certified Professional, Java EE Web Component Developer

KEY ACHIEVEMENTS

- **for millions of daily transactions at Allianz** — 99.9% system availability
- **through CI/CD automation** — 70% reduction in deployment time
- **testing framework at Allianz** — 85% unit & integration test coverage
- **through schema & indexing optimisation** — 60% database query improvement
- **through service-level optimisation** — 40% backend performance improvement
